

Triza Shashankar

Computer Science Student | AI & ML Learner

trizashashankar2004@gmail.com

9860910638

[linkedin.com/in/triza](https://www.linkedin.com/in/triza)

Sinamangal, Kathmandu

PROFILE

Computing student with a strong curiosity for AI, machine learning, and modern intelligent systems. Enjoys learning new technologies through hands-on projects and exploring how real-world AI systems are designed. Interested in both technical problem-solving and communicating ideas clearly.

EDUCATION

BSc (Hons) Computer Science

2025 – Present

Herald College Kathmandu, Nepal

LEADERSHIP & EXPERIENCE

AI Community Leader / Head of Design · Herald College Kathmandu

2026 – Present

- Organization of AI/ML workshops, discussions, and learning sessions
- Collaborated with peers in AI-based projects
- Assisted in planning and execution of events focused on AI education and exploration

CORE SKILLS

AI / LLM	LLM API integration (Claude, GPT-4, Groq), prompt engineering, RAG pipeline design
Machine Learning	Supervised learning, linear regression, neural network fundamentals, document chunking
Development	Python, JavaScript, Flask, React, Cloud
AI Tools & Libraries	n8n, PyTorch, Scikit-learn, NumPy, Pandas, Jupyter Notebook
Version Control	Git & GitHub, branching workflow, structured commits
Communication	Technical writing, workshop facilitation, explaining AI concepts to non-technical audiences

PROJECTS

Semantic Search & RAG System — *Python · Sentence Transformers · HuggingFace · Groq · Git*

- Built a RAG pipeline from scratch to apply modern AI retrieval techniques at a practical level
- Implemented semantic search using embeddings and cosine similarity to retrieve relevant document passages
- Connected the retrieval layer to an LLM to generate grounded, source-backed answers

Machine Learning Foundations — *Python · NumPy · Pandas · Scikit-learn · PyTorch · Jupyter*

- Structured self-study into core supervised learning concepts with working implementations
- Implemented linear regression from scratch — gradient descent, loss functions, model evaluation
- Explored neural network fundamentals including forward propagation and activation functions

AI Financial Chatbot & ML Forecasting API — *Python · Flask · Google Gemini · MySQL · Render*

- Developed a Gemini-powered financial chatbot with prompt engineering to contextualise AI responses using user-specific ML predictions, delivering personalised spending insights
- Implemented statistical anomaly detection for smart notifications and enriched API responses with server-side computed analytics across 7 calculated fields

Full-Stack Real Estate Listing App — *HTML · CSS · JavaScript*

- Built a functional client-server web application end-to-end
